⚡ AI-Based Lifestyle Intelligence Platform

Because living well isn't just about working hard — it's about knowing yourself.

The Problem

In today's world, for someone to live a healthy and fulfilling life, **three pillars are non-negotiable: lifestyle, habits, and finances.**

Yet most people are failing at all three — not because they don't care, but because **they have no visibility.**

- They sleep poorly but don't connect it to their productivity crash on Thursdays.
- They overspend every month but can't pinpoint where the money went.
- They start habits and abandon them within two weeks — without knowing why.

The existing tools don't help:

Tool	Problem
Fitness apps	Track steps. That's it.
Expense trackers	Show you what you spent. No insight on why.
Habit apps	Just a checklist. No intelligence.
Journaling apps	Isolated. No connection to your actual data.

Everyone is tracking in silos. Nobody is connecting the dots.

There is no single platform that looks at your sleep, your spending, your habits, and your mood — and tells you what it actually means.

The Solution

> *"In today's world, lifestyle, habits and finances are the three pillars of a healthy, happy life. We built one platform to manage all three — intelligently."*

The AI-Based Lifestyle Intelligence Platform is a unified system that:

1. **Collects** everything in one place — daily logs, expenses, journals, mood
2. **Connects** the dots across domains — sleep vs. productivity, spending vs. stress
3. **Explains** what your data means — not just charts, but actual insights
4. **Advises** through an AI coach that knows *your* patterns, not generic tips

---

Why This Is Different

Traditional Apps	Our Platform
Separate apps for each domain	Everything in one unified system
You look at data	We tell you what the data means
Static charts	Dynamic AI-powered insights
Generic tips ("drink more water")	Personalized recommendations ("your water intake dropped 20% on days you skip breakfast")
No memory of your patterns	Learns and adapts over time

What It Does

Imagine logging your day and getting this:

```
Dashboard:  Steps: 8,432 | Sleep: 7.5 hrs | Water: 2.5L | Spent: ₹450
AI Insight: "You slept 1hr less than your weekly average. Consider winding down
earlier."
Chatbot:    "Why am I feeling tired?"
            → "Your sleep dropped 15% this week. On top of that, your water
intake
               averaged 1.8L — below your 2.5L target. Both are affecting your
energy."
```

Behind that simple experience, a full **platform pipeline** runs:

```
Your daily input
     ↓
📝 Daily Log Module     →  steps, sleep, water, meals, habits → stored
     ↓
💰 Expense Module       →  spending tracked by category → analyzed
     ↓
📊 Analytics Engine     →  weekly trends, habit completion rates → computed
     ↓
🤖 AI Insight Engine    →  rule-based + LLM-powered recommendations →
generated
     ↓
📈 Dashboard            →  everything visualized, in real-time
```

The tracking is the input. The intelligence is the product.

```

Tech Stack

```
Frontend  →  React + Redux (dashboard + forms + chat)
Backend   →  Java + Spring Boot (modular monolith)
Database  →  MySQL (structured) + MongoDB (flexible)
AI        →  Python FastAPI + LLM + RAG pipeline
```

Team

Member	Responsibility
Jagdish	Data Design, API Design, AI Integration
Mahim	UI/UX Design, Frontend Implementation

Member	Responsibility
Shaurya	AI System Design, LLM + RAG Pipeline

Documentation

Document	Description
SRS	Full Software Requirements Specification
Project Roadmap	Build phases, timeline, deliverables
Database Design	MySQL + MongoDB schema design
API Reference	REST API documentation
AI System Design	Rule engine + LLM + RAG architecture
UI Wireframes	ASCII wireframes for all pages
UI Design Spec	Frontend component & page specifications

Project Status

- [x] SRS Document — Complete
- [x] UI Wireframes — Complete
- [x] Dashboard Prototype — Complete (activity-tracker/)
- [ ] Database Implementation
- [ ] Backend Modules
- [ ] Frontend Pages
- [ ] AI Service
- [ ] Deployment

📄 *See `PROJECT_ROADMAP.md` for the full build plan and `srs.md` for the formal specification.*
